Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to a grain moisture meter, classified in class 73, subclass 73.
- II. Claims 4-7, drawn to means for determining temperature of the grain sample, classified in class 374, subclass 183.
- III. Claim 8, drawn to method of determining density of grains, classified in class 73, subclass 32R, 433.

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as simply measuring the temperature of grain or other produce, having nothing to do with the moisture content. Invention III doesn't describe an integral part of the grain moisture meter and moisture determination, just a method in measuring density of any grain-like substance, such as rice, which could be used with invention I or any series of containers with known volumes and weight and a scale. See MPEP § 806.05(d).

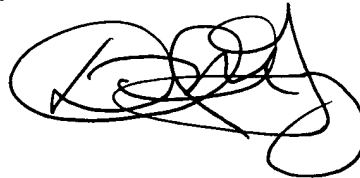

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
